Food webs: the systems view

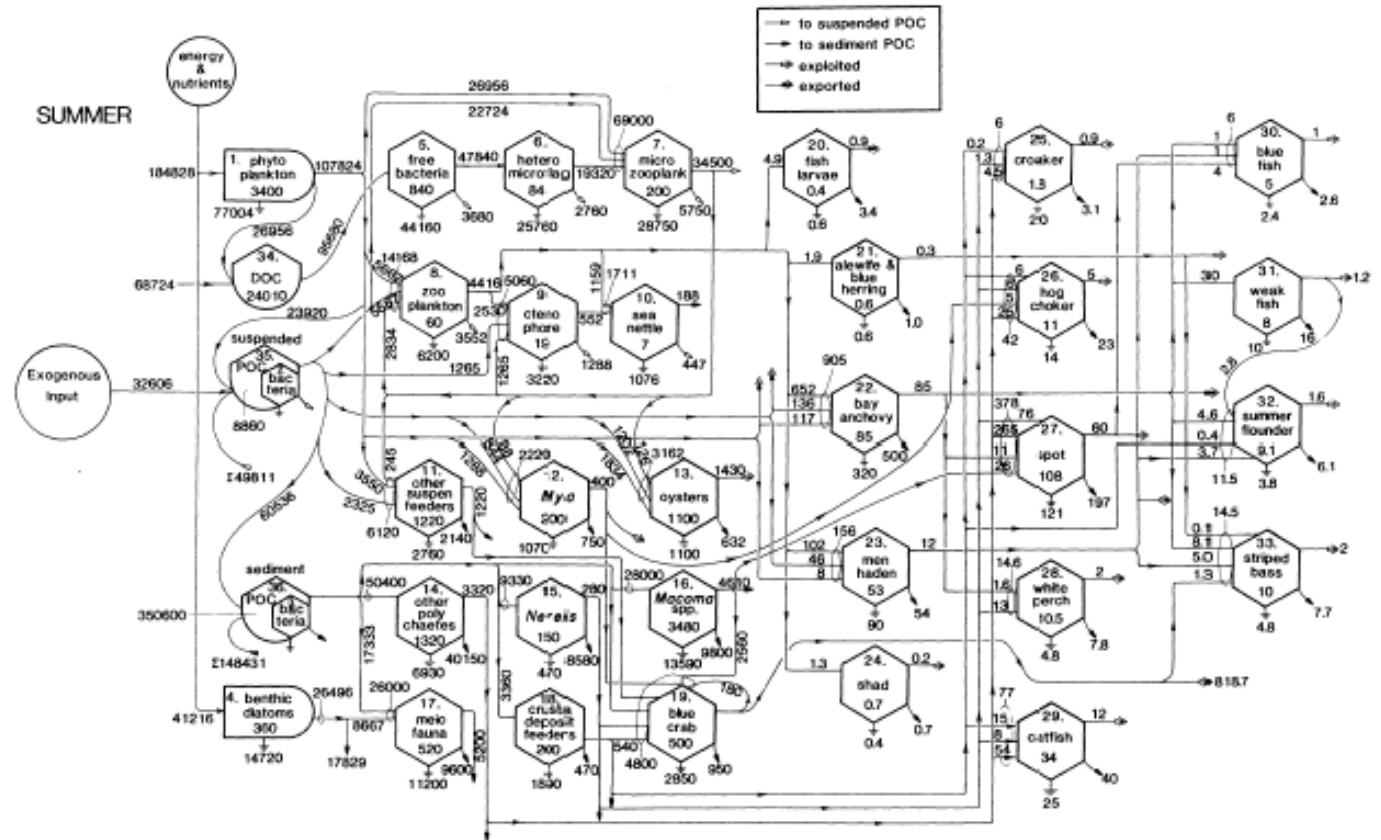

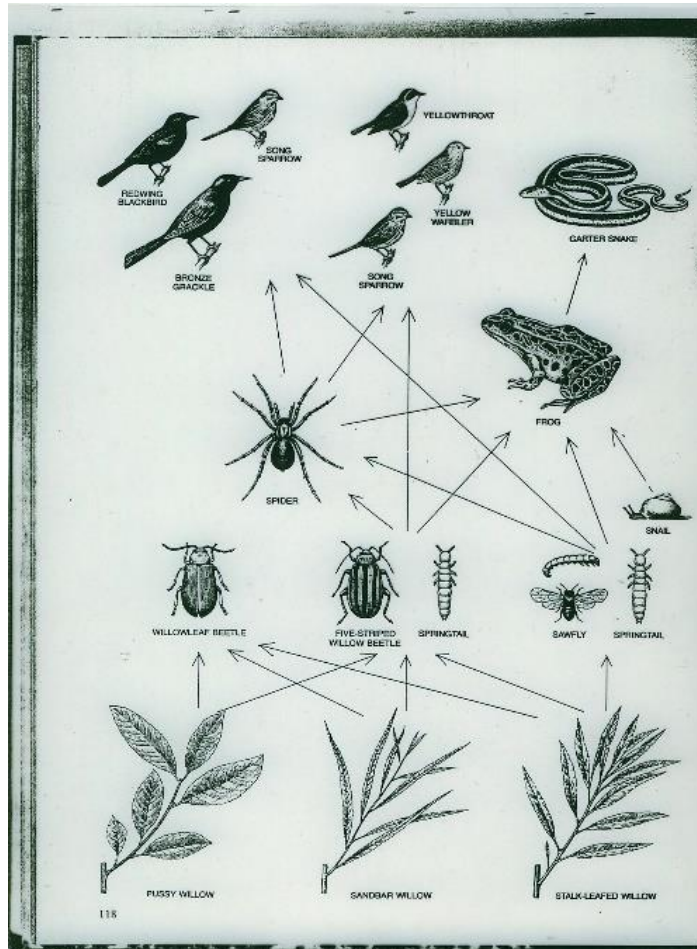

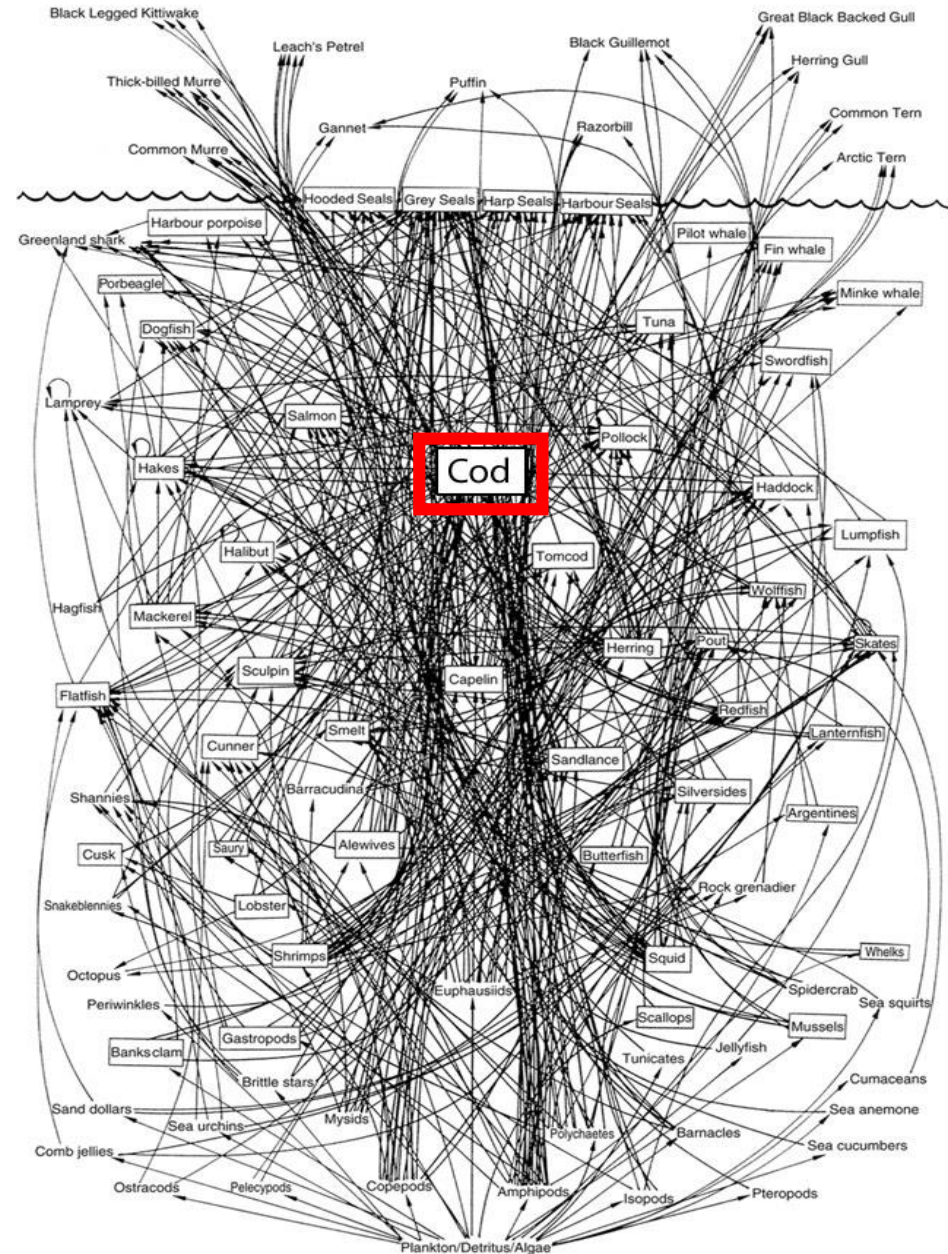

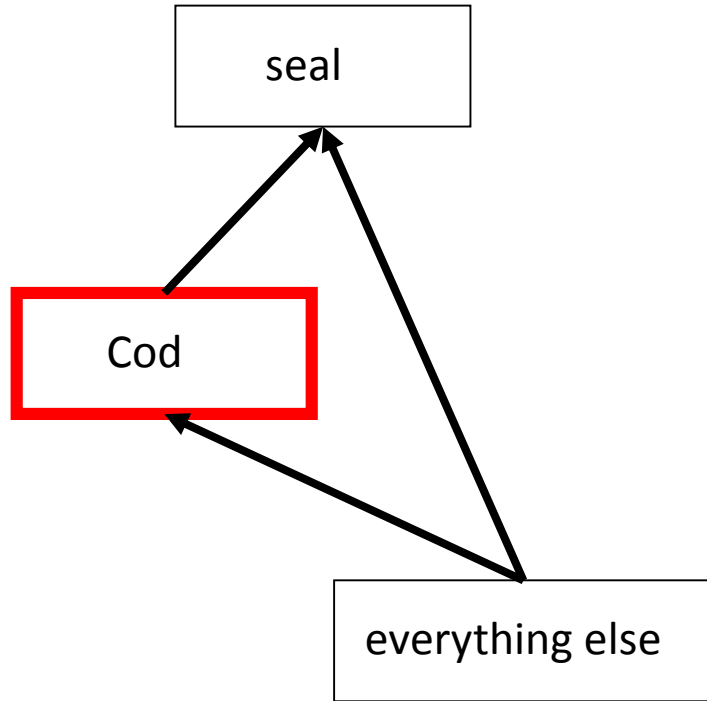

FIG. 2. Energy flow network of the mesohaline area of Chesapeake Bay during summer (biomass C in mg/m^2 , carbon flows in $\text{mg} \cdot \text{m}^{-2} \cdot \text{summer}^{-1}$).

Food webs: aggregation

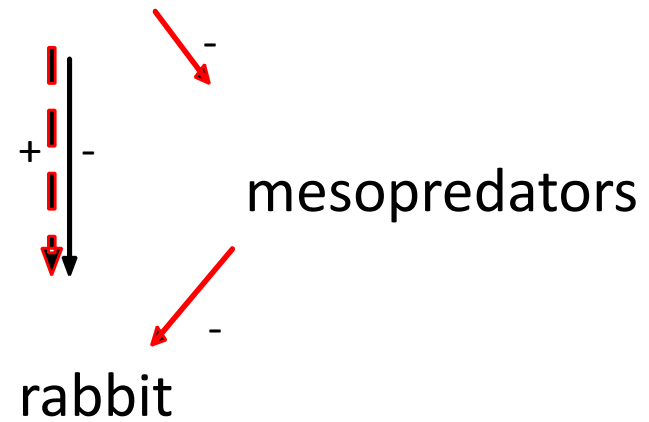

A simplified food web for the Northwest Atlantic. © IMMA

Food webs: indirect effects

Iberian lynx

trophic cascade > predation

Food webs: keystone species

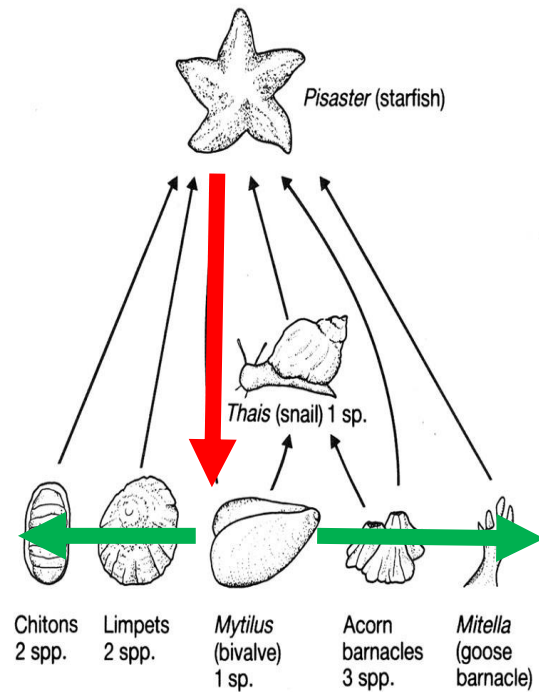

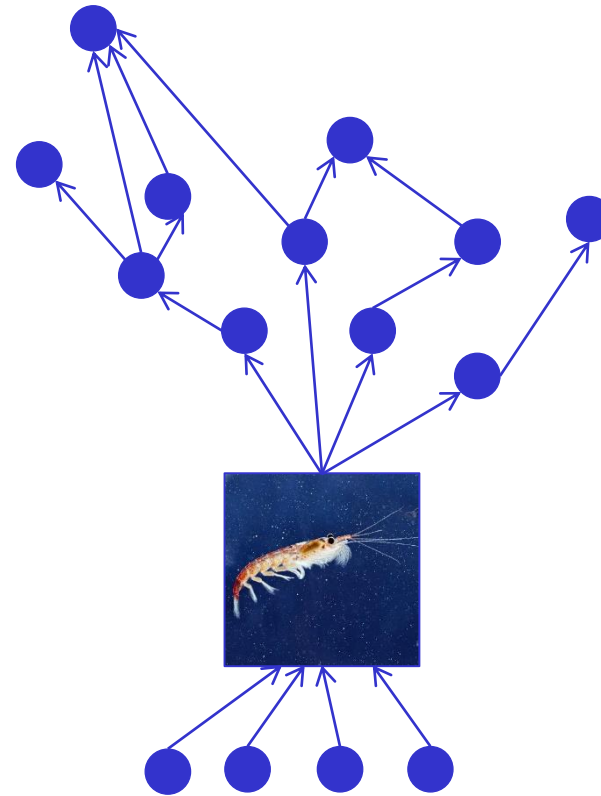

Figure 21.3. Paine's rocky shore community. (After Paine, 1966.)

Food webs: network importance

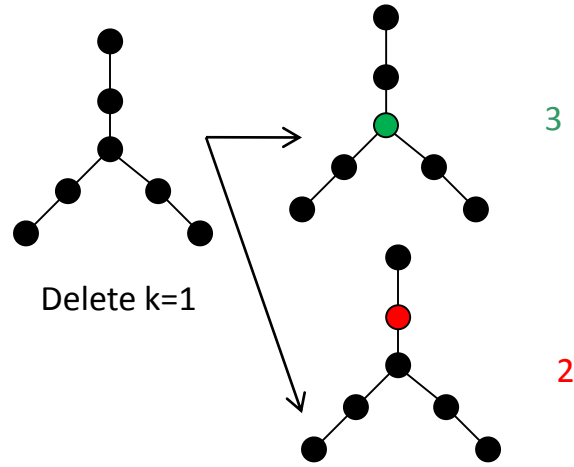

Food webs: missing links

Food webs: central nodes

Food webs: KP sets

Food webs: KP sets

Centrality index (e.g. Degree)

Single-node rank

A
B
C

Multi-node solutions

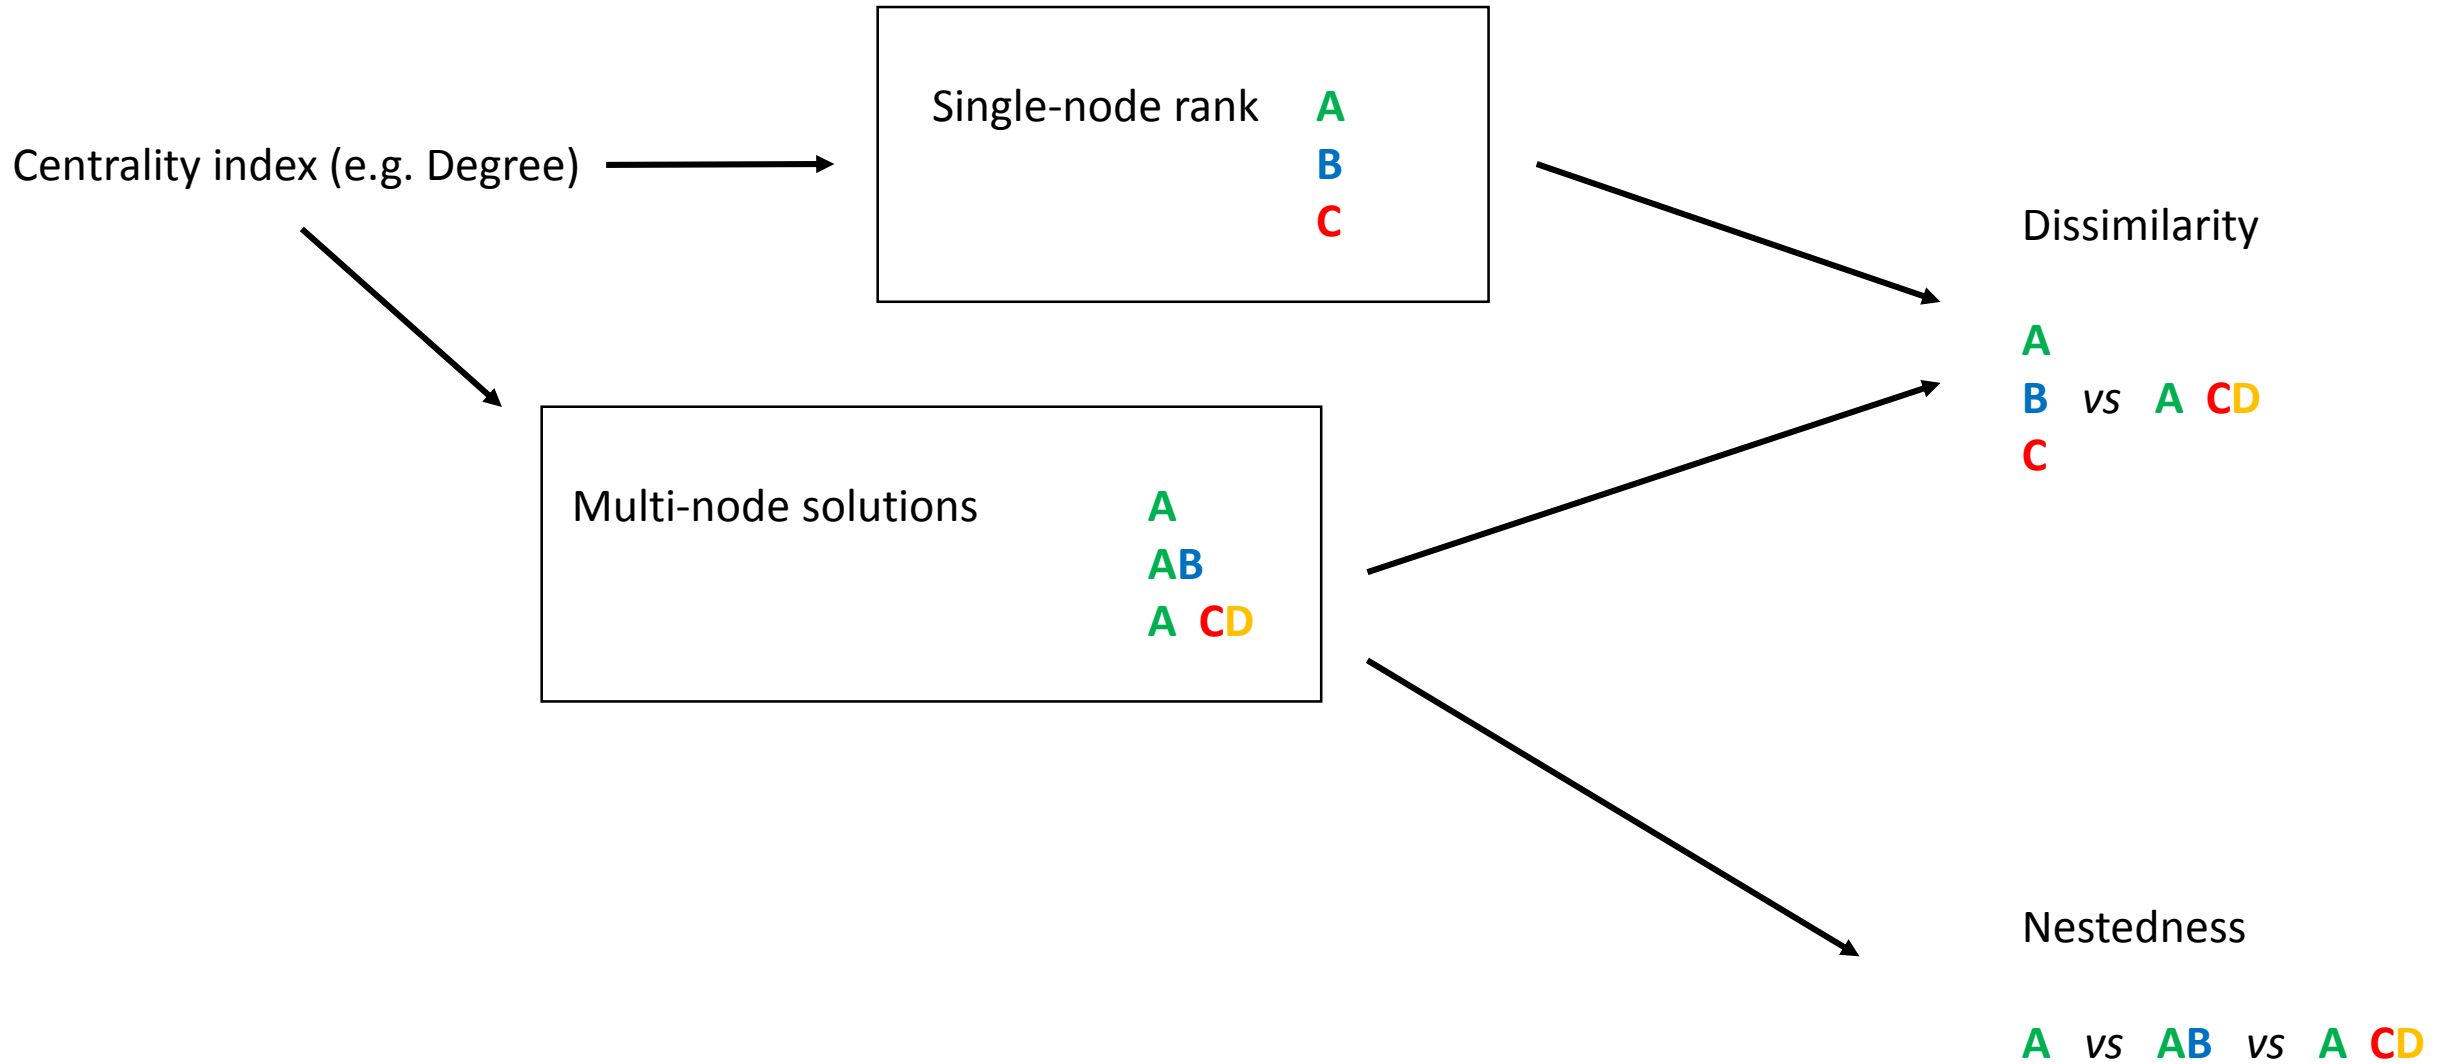

A
AB
A CD

Dissimilarity

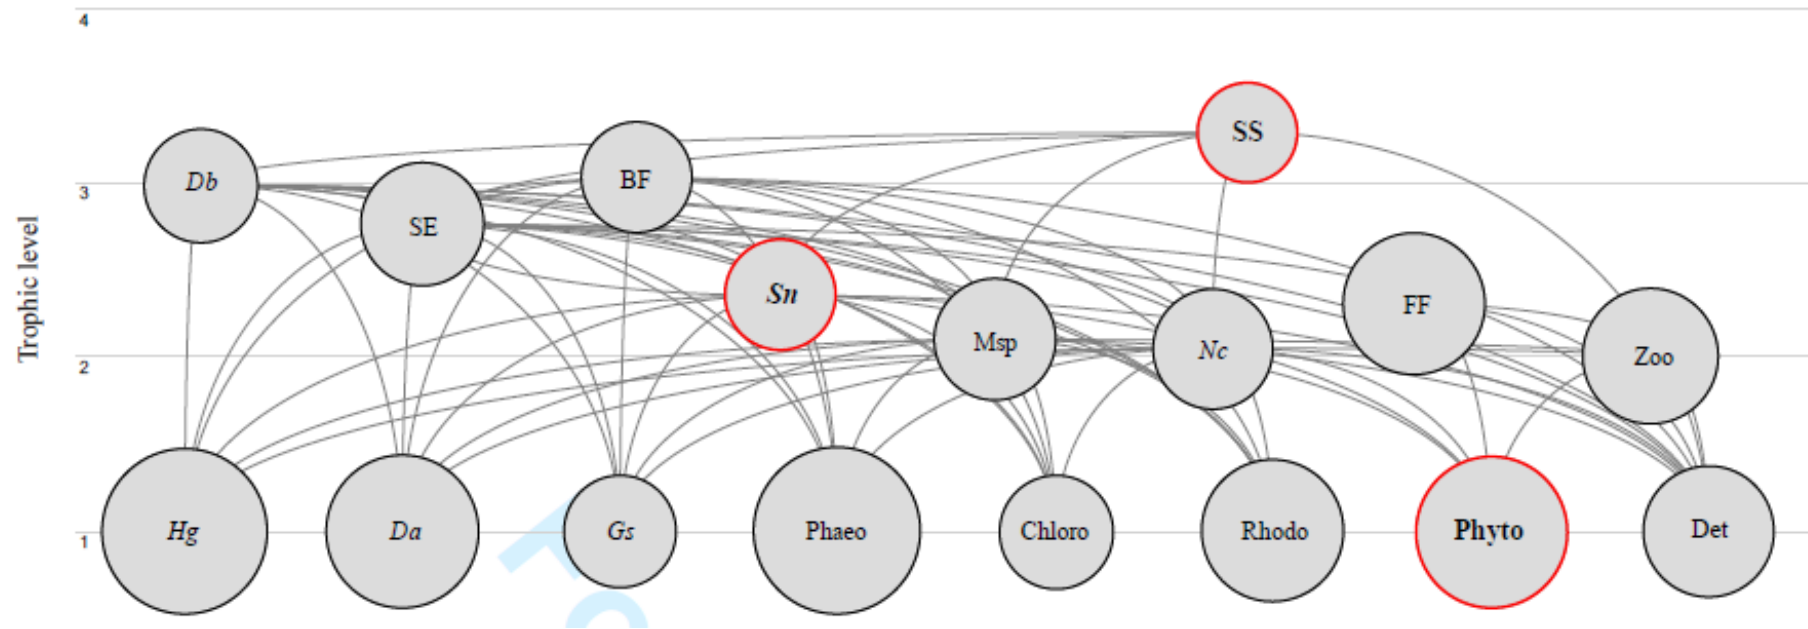

A
B vs A CD
C

Nestedness

A vs AB vs A CD

Food webs: keystone complexes

Food webs: roles and positions

Structural
equivalence

Regular
equivalence

El Verde
rainforest, Puerto
Rico

Food webs: simulations

„What is noise for the physicist
is music for the biologist”
Daniel Simberloff

Stochastic IBM

BlenX process algebra

Number of individuals

Rates of interactions

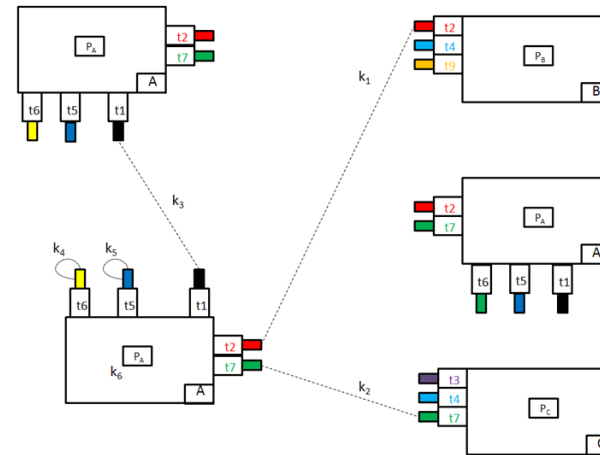

Kinetics

Balancing (genetic algorithm)

Sensitivity analysis

Community response

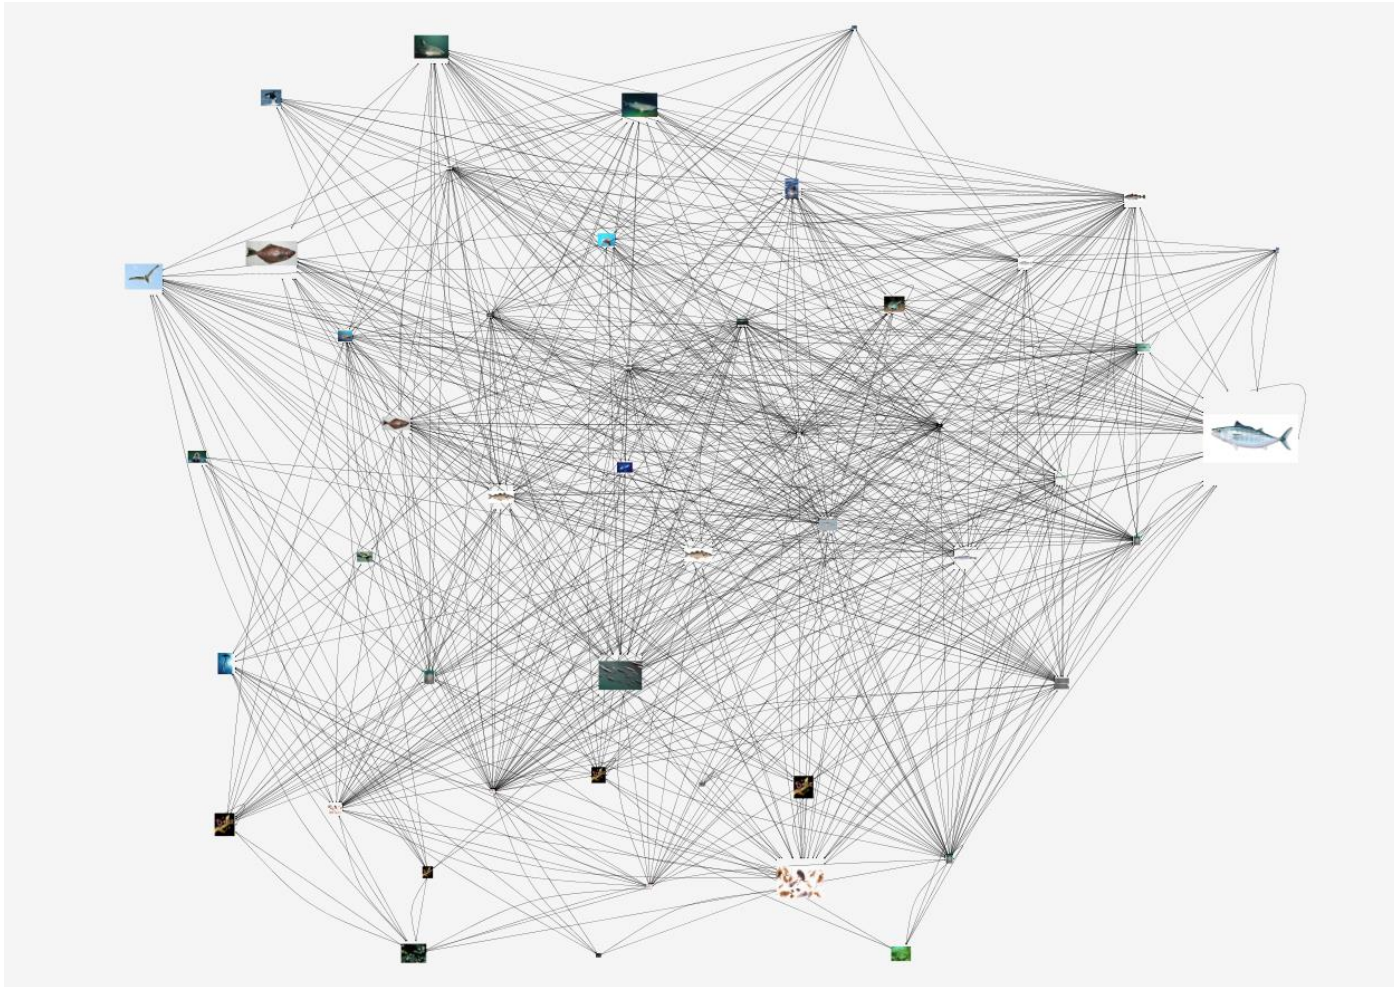

$$A_j = \frac{\sum_{k=1}^R a_{k,j}(t)}{R}$$

$$A_{ij} = \frac{\sum_{k=1}^R a_{ij}(t)}{R}$$

$$RR_{ij} = \frac{|A_j - A_{ij}|}{A_j}$$

Food webs: marine fisheries

	I_H
Nearshore demersals	231.09
Adult arrowtooth	147.71
Herbivorous zooplank	141.79
Juvenile herring	131.80
Seabirds	121.91
Sleeper shark	117.45
Salmon shark	115.22
Juvenile pollock (0)	103.66
Juv. Arrowtooth	103.21
Adult Pollock (1+)	98.94
Near phytoplankton	98.05
Capelin	94.51
Shallow sm infauna	93.31
Deep lg infauna	92.59
Pacific cod	91.97
Jellies	90.49
Lingcod	88.97
Resident orca	88.75
Pinnipeds	88.75
Macrophytes	87.24
Adult herring	84.56
Sea otter	84.51
Porpoise	82.18
Deep sm infauna	80.51
Invert-eating birds	79.90
Juvenile salmon (0-1)	79.40
Baleen Whales	79.10
Adult salmon	78.41
Sandlance	77.68
Near omnivorous zoops	77.25
Octopods	77.00
Deep demersal fishes	75.17
Shallow lg epibenthos	75.01
Shallow lg infauna	72.59
Spiny dogfish	70.29
Deep epibenthos	66.93
Rockfish	66.83
Shallow sm epibenthos	66.51
Near herbiv zooplank	63.48
Halibut	61.96
Sablefish	61.79
Meiofauna	60.89
Omnivorous zooplank	60.59
Eulachon	57.33
Avian raptors	56.25
Transient orca	53.77
Squid	52.26
Offshore phytoplankton	48.99

ZOOM-IN: social networks

Social networks: dominance

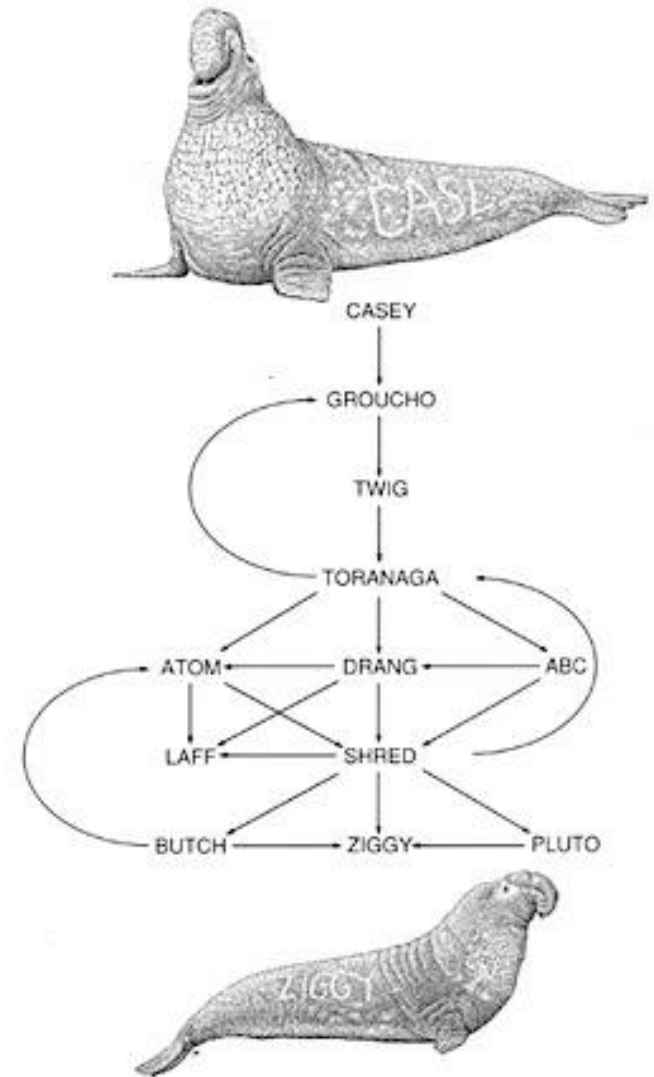

FIG. 6.21. Example of northern elephant seal male dominance hierarchy during one breeding season at Aho Nuevo Island. Drawing by Pieter Fildes.

Social networks: proximity

Social networks: multiple links

grazing

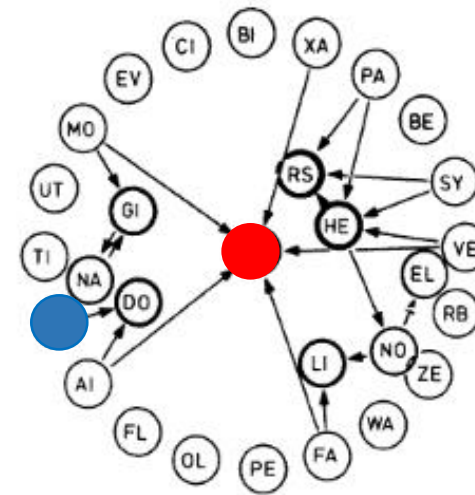

Social networks: multiple links

grazing

licking

Social networks: dynamics

Queens of *Ropalidia marginata*

● Post-queen

● Queen

Social networks: signed graphs

Picnic 2007, **positive** links form two major cliques

Social networks: signed graphs

Picnic 2007, **negative** links mostly between the two cliques

Social networks: balance

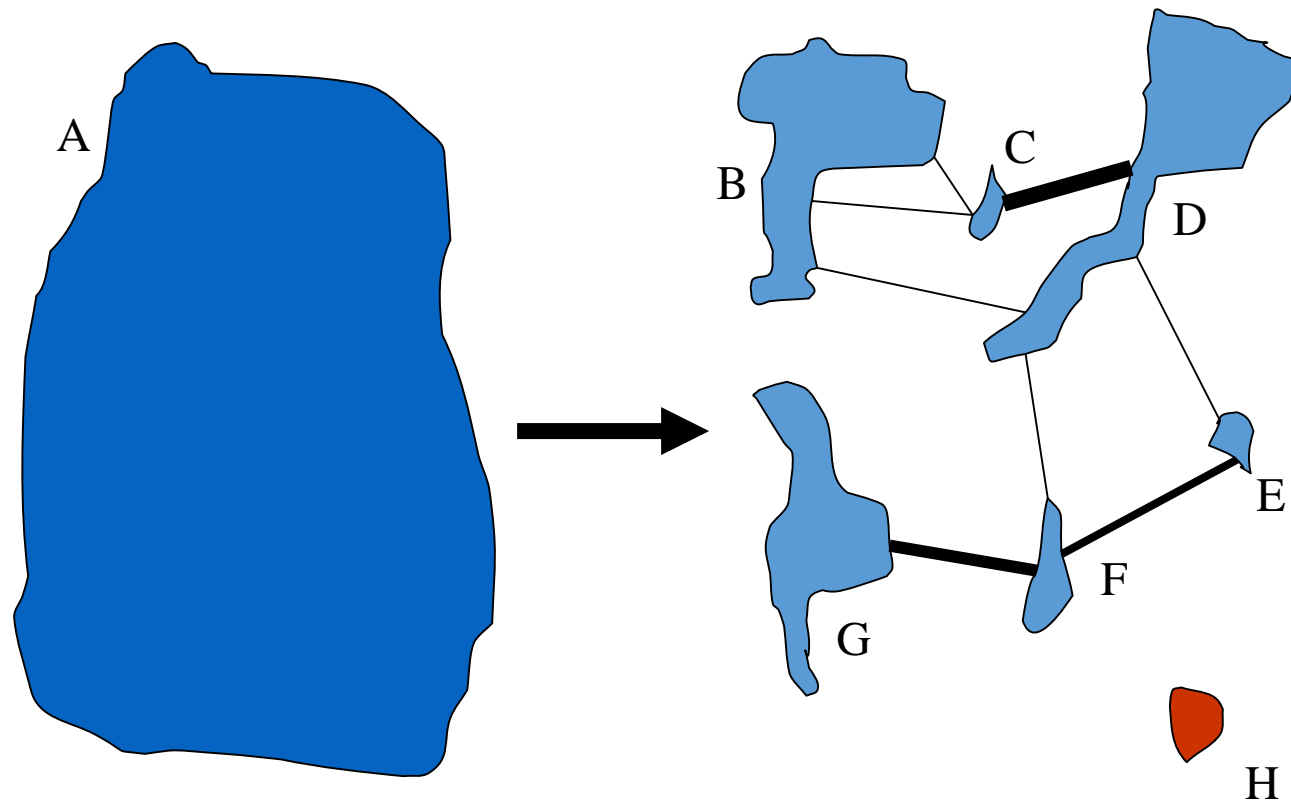

E Egypt
 A the other Arab countries
 B Great Britain
 C Canada
 F France
 I Israel
 D India
 U U.S.A.
 R U.S.S.R.
 H Hungary

Social networks: time series

Landscape graphs: isolation

Landscape graphs: topology

Necklace

Hierarchy: the vertical links

Hierarchy: the vertical links

Methods

Degree: D

● D_{in} (in-degree) = 2

D_{out} (out-degree) = 1

D (degree) = $D_{in} + D_{out} = 3$

D_{in}	D_{out}	D
1	0	1
2	1	3
1	1	2
2	1	3
2	2	4
1	0	1
0	1	1
0	3	3

Degree: D

Net status: Δs

- | | | |
|----------------|------------|----------------|
| 1. bear | 6. insect | 11. salamander |
| 2. bird | 7. plants | 12. skunk |
| 3. deer | 8. rabbit | 13. toad |
| 4. fox | 9. raccoon | 14. wildcat |
| 5. gartersnake | 10. rodent | 15. wolf |

$$s = \sum d_{ix}$$

Net status: Δs

● $s(\text{status}) = 1 + 2 = 3$

Net status: Δs

● $s(\text{status}) = 1 + 2 = 3$

● $s'(\text{contra-status}) = 1 + 2 + 2 = 5$

Net status: Δs

● $s(\text{status}) = 1 + 2 = 3$

● $s'(\text{contra-status}) = 1 + 2 + 2 = 5$

● $\Delta s(\text{net status}) = s - s' = -2$

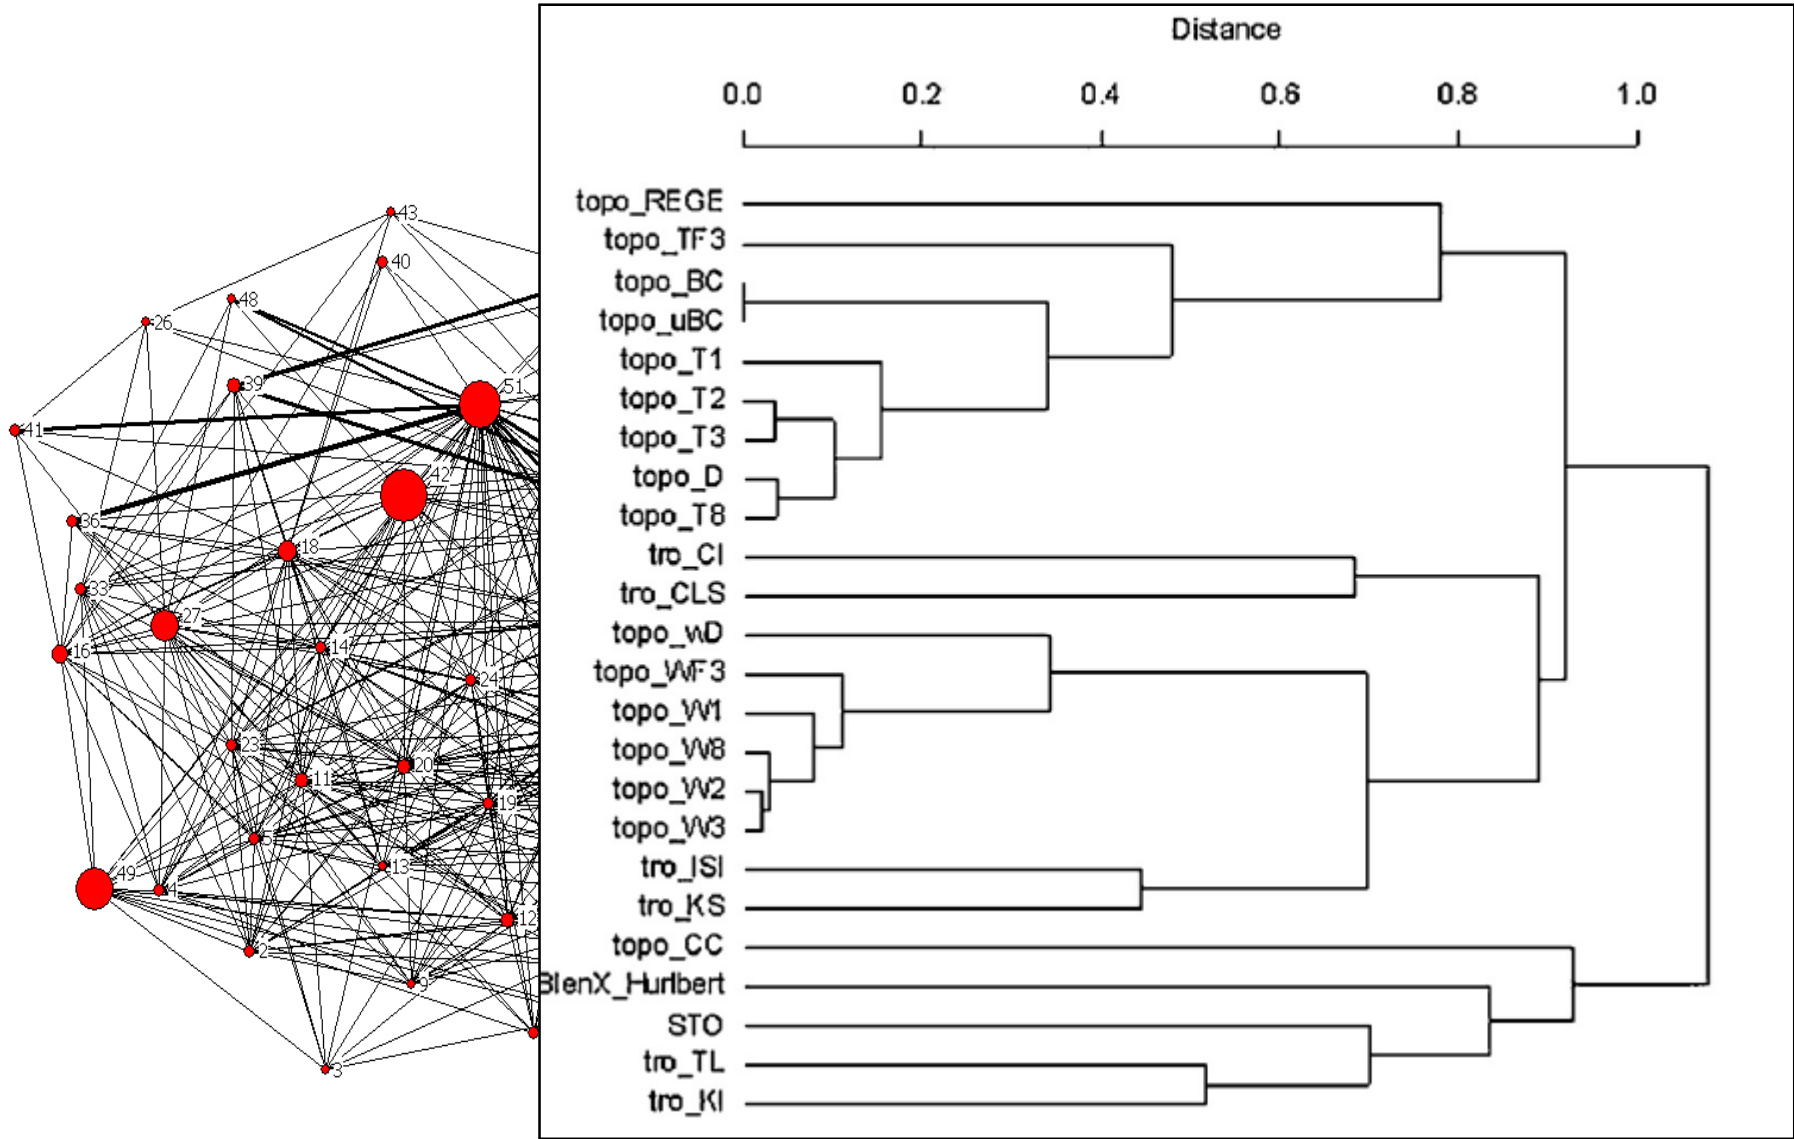

s	s'	Δs
0	15	-15
1	9	-8
3	5	-2
3	4	-1
7	2	5
0	1	-1
12	0	12
10	0	10

Net status: Δs

Positional vs dynamical importance of network nodes

Positional vs dynamical importance of network nodes

- 24:
- 1 trophic level
 - 8 topology (binary)
 - 5 topology (weighted)
 - 3 similarity (binary)
 - 1 similarity (weighted)
 - 5 dynamics (deterministic)
 - 1 dynamics (stochastic)

Thank you
